

Smart brick PCB - actual-size fit check

Print at 100% / Actual size. Disable Fit to page. Units: millimetres.

Verify this bar measures exactly 50 mm:

1. Align both ESP32 header rows: 15 pins per row, 25.4 mm between centres.
2. Place each actual breakout over the holes and compare every pin label.
3. Body/header offsets for RC522, MPU9250, GY-271 and HW-201 are provisional.
4. Charger and booster mount on insulated spacers with short labelled solder links.
5. South IR body overhangs by 2 mm; allow extra enclosure clearance for its LEDs.
6. ERM body is 13 x 5 mm; its 21 x 13 mm allowance uses the assumed weight clearance.
7. Keep battery, metal and case fasteners away from the radio/RFID antenna areas.
8. If a module does not match, revise CAD before ordering. This is not a fit certification.
